场景切换

流程

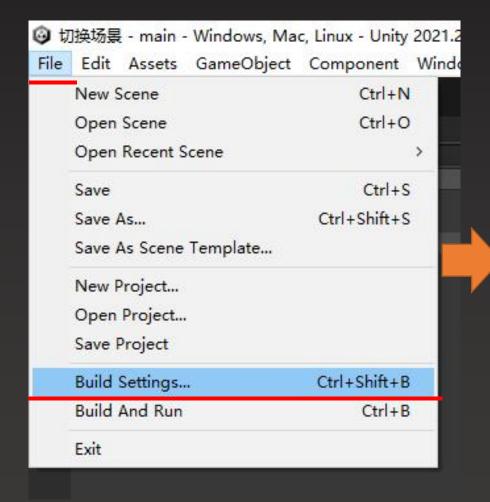

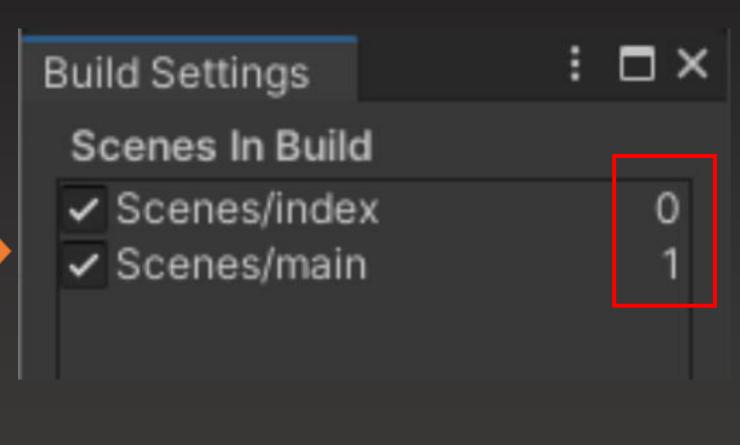

1、创建场景

2、载入场景

创建场景 载入场景 **编写代码** 挂载代码 设置按钮

3、编写代码

```
using System.Collections;
                        using System.Collections.Generic;
                        using UnityEngine;
                                                                        Build Settings
   载入场景管理包
                        using UnityEngine.SceneManagement;
                                                                         Scenes In Build

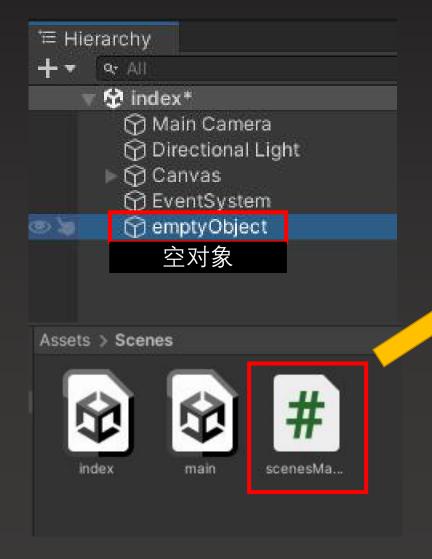

✓ Scenes/index

                        public class scenesManager: MonoBehaviour

✓ Scenes/main

                          public void loadSce_Index()
加载index场景
                             SceneManager.LoadScene(0);
                          public void loadSce_Main()
加载main场景
                             SceneManager.LoadScene(1);
```

4、挂载代码

5、设置按钮
